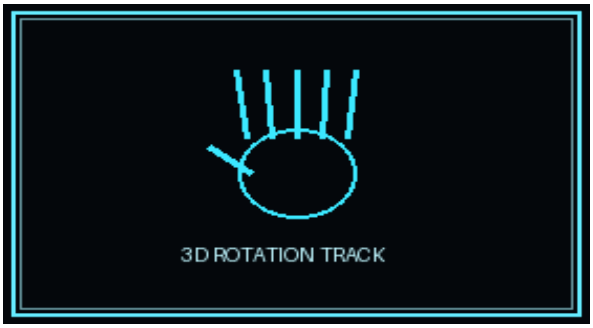
J.A.R.V.I.S. — TACTICAL HAND GESTURE MANUAL

COMPLETE 12-GESTURE WEBCAM SPECIFICATION & 3D HOLOGRAM CONTROL

Overview: In Hologram Mode and Camera Mode, J.A.R.V.I.S. optical sensors track your hands at 30 FPS. Manipulate 3D wireframes (Quantum Core, Car, Bike), capture snapshots, execute approvals, and switch agents naturally without touching your keyboard.

1. OPEN PALM MOVE

Rotate & Orient 3D Model



Hold an open flat palm facing camera. Move hand Left/Right/Up/Down to smoothly rotate the 3D hologram in real-time.

2. TWO-FINGER PINCH

Zoom & Scale In

Bring index finger and thumb together into a pinch. Pull closer to expand and scale up the 3D wireframe.

3. PINCH SPREAD

Zoom & Scale Out

Spread pinched fingers outward. Pushes back and shrinks the 3D hologram model to inspect global structure.

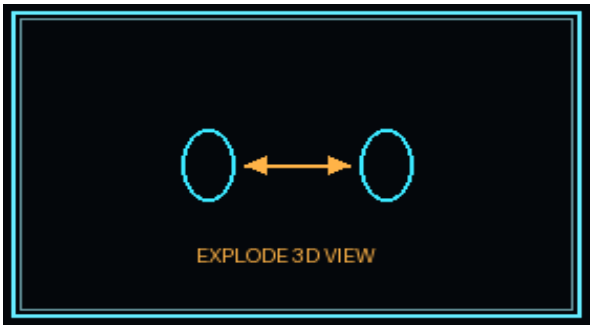
4. CLOSED FIST / GRAB

Freeze & Lock Orientation

Clench hand into a firm fist. JARVIS instantly locks the hologram's rotation in place, halting auto-spin.

5. TWO HANDS SPREAD

Exploded 3D Component View



Hold both hands in camera view and pull them apart. The active model separates into an exploded component view.

6. DOWNWARD PUSH

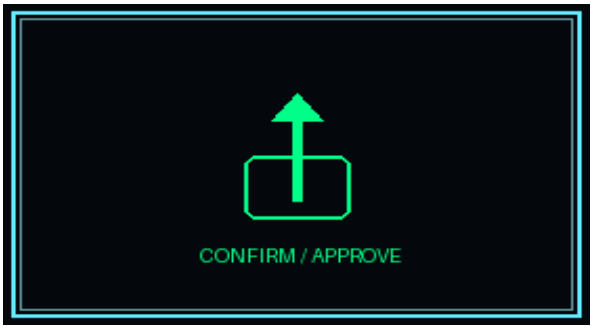
Stow Hologram (Clean Glass HUD)

Swipe your palm downward toward the desk. The 3D hologram folds away, restoring your clean glass HUD.

GESTURES 7 TO 12 — SYSTEM ACTIONS & VISION CONTROLS

7. THUMBS UP

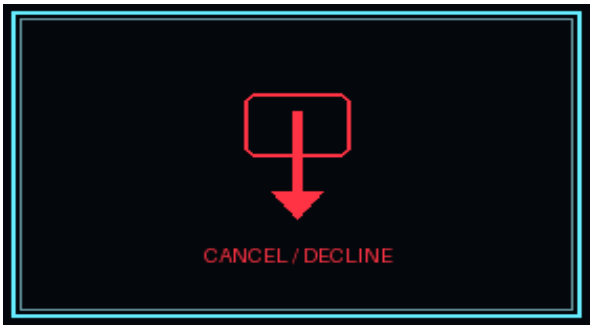
Confirm / Authorize Action



Raise a thumbs-up gesture to confirm high-risk operations or authorize commands without needing to speak.

8. THUMBS DOWN

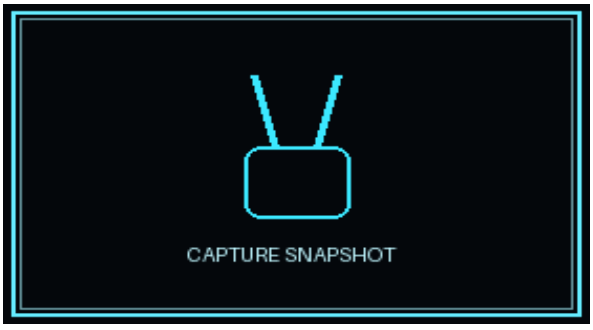
Cancel / Decline Action



Show a thumbs-down gesture to cancel, abort, or decline any pending operation or dialog.

9. PEACE / V-SIGN

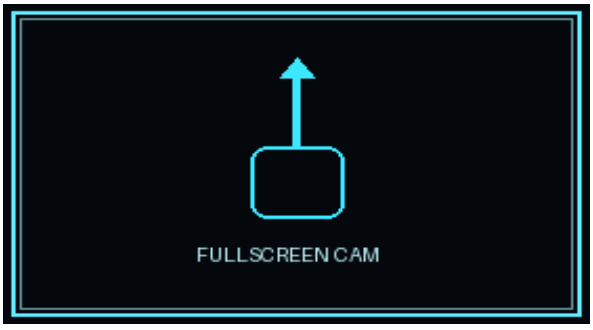
Capture Camera Snapshot



Form a two-finger V-sign (peace gesture). JARVIS triggers high-res optical frame capture and logs to telemetry.

10. INDEX POINT UP

Toggle Full-Screen Cam Mode



Point your index finger upward. Switches between complete screen camera passthrough and dark glass workshop.

11. HORIZONTAL WAVE

Cycle Agents (JARVIS/FRIDAY/EDITH/ULTRON)

Wave hand horizontally across camera view to cycle color themes and agent personas in sequence.

12. DOUBLE TAP / CLAP

Reset Model Arrangement

Quick two-hand tap or rapid double open-palm motion. Resets model position, scale, and rotation to origin.

Voice Control Synergy: All gestures can also be triggered or combined via microphone commands: *'Hologram mode'*, *'Scan room'*, *'Camera mode'*, *'Snapshot'*, *'Switch model to deepseek'*, and *'Call my friend'*.
